

The invention refers to the bench work tools.

Summary of the invention consists in that the percussion screwdriver contains a bush, inside of which it is situated the lead screw without self-breaking, onto which there is installed a nut, blade. In such case onto the lead screw without self-breaking it is mounted an adjustable cover with a hole for the blade, and on its external side it is executed a prominence round the perimeter of the said hole. Moreover, inside the cover above the blade it is placed a spring.
