

0026

The utility model relates to devices, serving for life saving and may be used for the protection of biological objects from negative power action, for example, electric, biological etc.

Summary of the utility model consists in that the neutralizer of negative power action has the form of a shaded coil, consisting of double-conductor cable, the start of the first conductor being connected to the end of the second conductor, and the start of the second conductor – to the end of the first conductor.

The technical result consists in the creation of a compact device neutralizing the power.
