

94-0117

The invention is related to microbicidal substances with synergetic action against the infection of plants, synergetic activity on plants disease and with reproduction material or another material of vegetable or animal origins, in particular of seed by microorganism.

The microbicidal substance contains two active components: 4-(2,2-difluor-1,3-benzodioxol-7-yl)-1H-pyrrol-3-carbonitrile (I) and α -2-(4-chlorophenyl)ethyl- α -(1,1-dimethylethyle)- β -(1H-1,2,4-triazolyl)-1-ethanol(II), as well as special additions. Weight ratio of components I:II constitutes 6,8:1-1:2,4 in quantity of 4-75% of weight, special additions constitutes the rest.
