

99-0195

The invention relates to games production.

The game contains a transparent tubular body, in the upper part of which it is fixed a guiding member with conic openings. The body is closed with transparent cover, between the body and the cover with the possibility of relation about its own axis it is installed a partition made in the form of a disk with openings, in the periphery of which it is made a prominence, placed into the slot of the cover wall. Into the body there are freely placed play-balls of different colours, on which surfaces there are applied distinctive signs.

The result consists in increasing the attractiveness.
