The invention refers to zootechny, namely to pig breeding and may be used for increasing productivity to brood sows.

Summary of the invention consists in that in the capacity of biostimulator for increasing productivity to brood sows is used a medicinal preparation containing extract of the *Spirulina platensis* CNM-CB-02 cyanobacteria strain biomass in a concentration of 0,1...1,0% of dry substance in physiological solution. The preparation is administered intramuscular in a dose of 1...10 ml/cap. 3 times: within 1,5 month and in 4...7 days before and in 5...7 days after farrow.

The result of the invention consists in increasing the production indexes to brood sows: prolificacy, number of viable pigs and pigs large-sized at birth.
