The invention refers to medicine, namely to the traumatology and orthopedics and may be used for treatment of the pelvis bones vertical-instable affections.

Summary of the invention consists in that into the iliac crest and acromion there are introduced fixing arms which are coupled with a supporting rod, into the iliac crest being introduced 2...5 spokes, into the acromion - 2 Kirshner spokes, thereafter the shifted iliac crest fragment is moved downwards up to complete adaptation thereof.

The result of the invention consists in the stable fixation of the pelvis ring and in the precocious mobilization of the patient.
