

The invention refers to medicine, in particular to gynecology, and can be used for treating women suffering from chronic inflammatory diseases of genital organs.

The method, according to the invention, consists in that on the 9-th...13-th day of menstrual cycle it is carried out the electroacupuncture bioresonance testing with application of plate electrodes on the palms and soles of the patient, application of magnetic electrodes on the sacral and suprapubic regions and action on the patient with electromagnetic waves from 1 up to 1000 Hz and power flux density of 1,0...1,2 mW/cm², it is determined the wave bioresonance frequency leading to the appearance of biological effects. Then, during 17 min, it is acted with waves having determined frequency on the region of small pelvis organs with alternation of excitation period of 3 s and relaxation period of 1 s, afterwards it is carried out recording of patient electromagnetic field by means of magnetic inductors onto an inert carrier during 3 min with obtaining of a bioenergetic therapeutic agent, which is sublingually administered in efficient quantity during 2...3 weeks 1...3 times a day, the course of treatment includes 3...6 procedures with an interval of 3 weeks. Also, during one month it is administered lymphomyosot 7...10 drops 2 times a day 20 min before meals *per os* and traumeel S 2,0...2,2 ml 2 times a week intramuscularly.
