

a 2008 0217

The invention relates to the production of feeds that can be used for additional feeding of wild animals.

The process includes placement in layers of the milled barley straw and of the fresh apple pulp, beginning with a layer of straw having a thickness of 10 cm with the subsequent layers of straw and apple pulp having the thickness of 5 cm, powdering of each layer of apple pulp with a mixture of table mineral salt iodated with  $\text{KIO}_3$  and cobalt chloride, at the same time the components are taken in the following ratio, mass %:

milled barley straw	10.0...10.5
fresh apple pulp	88.5...89.5
table mineral salt iodated with $\text{KIO}_3$	0.3...0.5
cobalt chloride	0.4...0.6.
