

The invention relates to medicine, namely to pulmonology and dermatology, and can be used for treating chronic obstructive broncho-pneumopathy associated with widespread psoriasis vulgaris in elderly patients.

Summary of the invention consists in that bronchodilatory, antiinflammatory, antibi-otics, mucolytic and vitamin preparations are administered, as well as a 0.9% NaCl solution, ozonized with an oxygen-ozone mixture, with an ozone concentration of 5 µg/mL, intravenously, 500 mL, once a day for 7 days is administered. Then is carried out a large autohemotherapy with an ozone concentration of 60...70 µg/mL, twice a week, 5...6 sessions, and local applications are carried out with ozonated grapeseed oil, with an ozone concentration of 8000...10000 µg/L, 1...2 times a day, the course of treatment is 10...14 days. At the same time, a product of rice bran and Shiitake mushrooms MGN-3 arabinoxylan is administered, 1 g 3 times a day after meals for 21 days, then 1 g/day, 30 min after meals, *per os*, for 90 days.
