

u 2004 0017

The utility model relates to the suspended handrails for vehicles, carrying publicity or any other information.

The handrail, according to the first variant, is made of two pieces, fastened between them, each of them having a section made of transparent material, at the same time both pieces are fastened between them so that the transparent sections are combined, and the publicity-informational sheet is placed between the pieces in the region of transparent sections.

The handrail, according to the second variant, additionally contains at least one transparent detachable plate, fixed onto the handrail surface by means of directed slide bars, the publicity-informational sheet being placed between the handrail surface and the transparent plate.

The proposed construction in both variants permits, on the one hand, to exclude the unauthorized access to the publicity-informational sheet and, on the other hand, provides for the simplicity of servicing.
