

u 2004 0019

The utility model refers to agriculture, namely to a fruit harvesting bag.

The fruit harvesting bag includes a body of hard material, the anterior wall of which is made convex and the posterior one - plane, a cloth sleeve, rigidly fixed to the lower part of the body, means for lifting the lower part of the sleeve and for fixation thereof to the body and belts. As lifting and fixation means is used a cord with ring for tightening the lower part of the sleeve and for lifting thereof inside the bag, as well as hooks, placed outside the anterior wall of the body.
