

u 2008 0005

The utility model refers to the construction, namely to connectors for permanent shuttering.

The connector for permanent shuttering includes two cradles placed in parallel, joined between them with a perpendicularly fixed rod, made of two components with the possibility of controlling its length in preset limits by displacing the components about each other and with the possibility of fixing the latter after finishing the control. Novelty consists in that the components are made in the form of plates, one of which is equipped with studs and into another there are made holes corresponding to the studs.
