

a 2018 0083

The invention relates to biotechnology, in particular to a medium for cultivation of *Trichoderma koningii* Oudemans CNMN FD 15 fungi strain and can be used for producing proteolytic drugs with a wide range of applications in medicine, pharmaceutical industry.

The nutrient medium, according to the invention, comprises, %: wheat bran 2.0; soy flour 1.0; CaCO<sub>3</sub> 0.2; (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> 0.1; the compound isobutyrate-chloro-methoxy-(2,4,6-tris(2-pyridyl)-s-triazine)-manganese(II) methanol solvate or diaqua-nitrato-(2,4,6-tris-(2-pyridyl)-s-triazine)-manganese(II) nitrate 0.0005...0.0010 and drinking water the rest.

The technical result of the invention consists in increasing the activity of neutral proteases by 40.9...84.9%.
