

**98-0212**

The invention relates to the biotechnology and may be used for the preparation of microbial materials containing biphidobacteria.

The nutritive medium contains lactose, pepton, sodium chloride, home-brewed beer obtained at yeast production, agar and potable water, at the following components rate, g/l:

lactose	9,00...11,00
pepton	9,00...11,00
sodium chloride	4,50...5,50
home-brewed beer obtained at the yeast production, ml	450,0...500,0
agar	0,65...0,75
potable water	the rest.

The result of the invention consists in increasing the biphidobacteria biomass.
