The invention refers to agriculture, in particular to viticulture and may be applied for vine extra-root treatment. The process for vine treatment includes the extra-root treatment 5 days before and 15 days after flowering with an aqueous suspension, containing 30...40 vol.% of concentrated wine yeast with a content of dry substances of 25%, the total consumption constituting 600...800 L/ha. The result consists in increasing the productivity and quality of grapes.
