The invention relates to agriculture and chemistry, namely to a process for treating common winter wheat grains to increase resistance to the action of *F. oxysporum* fungi.

The process, according to the invention, consists in treating the grains with an aqueous solution of the compound (Z)-1-(2,4-dichlorophenyl)-5-methyl-2-(1H-1,2,4-triazol-1-yl)hex-1-en-3-one with the formula:

in a concentration of 0.005-0.01%, for 3 hours.
